ENVISION IMAGING OF TULSA

INFORMED CONSENT FOR ARTHROGRAM

PATIENT NAME: _____ DATE: _____

You have the right to be informed about your condition and the recommended surgical, medical or diagnostic procedure to be used so that you may make the decision whether or not to undergo the procedure after knowing the risks and hazards involved. This disclosure is not meant to alarm you, but rather to inform you of your procedure so that you may choose to give or withhold your consent for the procedure.

If you are pregnant or think that you may be pregnant, please inform the facility personnel at once.

Your physician has requested that we perform an arthrographic examination of your _____. The purpose of this procedure is to provide information to aid your physician in diagnosing and treating your complaint.

This procedure involves administering a local anesthetic and injecting a contrast medium in the _____ joint through a needle. There may be a slight burning sensation when the anesthetic agent is injected. This will pass quickly. During injection of the contrast medium, you may feel pressure or pain; this is normal for this procedure. Following this procedure, an MRI or CT exam may be performed to further evaluate the joint.

Potential Risks: The following complications are possible: anytime an injection is given, there is the potential for pain, bleeding, bruising or swelling at the injection site. Untreated complications could lead to loss of use of the joint. You can expect pain or soreness lasting up to 24 hours after the injection. Additional allergic reactions in response to the contrast agent may include hives, shortness of breath or difficulty in swallowing. There have been rare instances of death after the administration of the contrast agent. It is very important that you inform the technologist if you experience any of the conditions mentioned above.

If you have previously had a reaction to a contrast injection such as hives, severe itching, shortness of breath and/or any significant reaction requiring hospitalization, a history of asthma or other allergic conditions, any history of anemia, sickle cell anemia or kidney disorder, are **PREGNANT OR BREAST FEEDING** you **MUST** inform the technologist.

I CERTIFY THAT THIS FORM HAS BEEN FULLY EXPLAINED TO ME, THAT I HAVE READ IT OR HAVE HAD IT READ TO ME, AND THAT I UNDERSTAND ITS CONTENTS.

I HAVE BEEN GIVEN THE OPPORTUNITY TO ASK QUESTIONS ABOUT THE ANESTHESIA, THE PROCEDURES TO BE USED, AND THE RISKS AND HAZARDS INVOLVED, AND I BELIEVE THAT I HAVE SUFFICIENT INFORMATION TO GIVE THIS INFORMED CONSENT.

INFORMED CONSENT FOR MRI WITH OR WITHOUT CONTRAST INJECTION

PATIENT NAME: _____

I, the undersigned, being either the patient named above or legally authorized representative of the patient named above, do hereby consent to the performance of medical diagnostic and imaging procedures on the terms and conditions more fully set out below. I understand that I have the right to be informed about the diagnostic imaging procedure being used so that I may make the decision whether or not to undergo the procedure.

1. **Consent to Imaging Procedure:** Your attending physician believes it beneficial for you to undergo a diagnostic imaging procedure known as magnetic resonance imaging (MRI) to obtain additional information that may aid in diagnosing and treating your medical condition. It has been explained to me that MRI does not use x-rays or radiation. Instead a magnetic field and radio waves are used to create an image of internal body structures. MRI is a painless procedure that only requires that you lie quietly on a padded table that gently glides you into the magnet. While the scanner is performing your scan, you will hear some humming and thumping sounds. These are normal and should not worry you. In some cases, a contrast agent may be injected into your vein in order to give a clearer image of the area being examined. The MRI study may be conducted without the injection of contrast, but the images may not be as helpful to the radiologist and your physician. Inform the technologist if you wish to refuse the contrast injection.
2. Because of the magnetic field and radio frequencies, people with a heart pacemaker, brain aneurysm clips, and some implanted metallic or electrical devices should not have an MRI. It is important that you inform the technologist if you have any of these metallic appliances. Please inform the technologist if you are pregnant or think that you may be pregnant.
3. **Potential Risks:** Anytime an injection is given there is the potential for bruising or swelling at the injection site. Occasionally, minor allergic reactions occur in the form of itching, sneezing, hives, swelling of the eyes, wheezing or nausea. These symptoms may require treatment with medication we have at hand. Rarely, a more serious reaction will occur. A radiologist will evaluate the situation and determine if additional medical treatment is necessary. Even though it is rare, medical statistics indicated that a fatality might occur from the injection of contrast. If you have had a reaction to a sickle cell anemia or kidney disorder, are pregnant or breast feeding, you **MUST** inform the technologist.
4. The benefit of this exam is to assist your physician with making a diagnosis. There may be other imaging alternatives, however your physician believes the MRI to be the best diagnostic test for you, after evaluating your symptoms and medical condition.

By my signature below, I hereby certify that I have fully read this consent, had it explained to me or have had it read to me. I have been given an opportunity to ask questions about my condition, alternative forms of treatment, and the procedures to be used, and the risks and hazards involved.

I understand its contents and have sufficient information to give this informed consent.
